About

I am a Master's student in Experience (UI/UX) Design at NIFT with expertise in user research, design research, problem-solving, wire-framing, and system thinking. My academic work has enabled me to acquire exceptional soft skills such as adaptability, communication, empathy, and presentation, making me a helpful team member. With a background in mathematics, I bring a special combination of critical thinking and inventive problem-solving abilities.

Through managing my YouTube channel, where I upload art instructions and handle everything on my own, I have developed valuable skills in video editing, filming techniques, social media management, digital marketing, audio recording and branding.

Overall, I am a driven and creative individual with a passion for designing innovative solutions and delivering quality work.
